### 1.17 - Gold Master Release 2.2.1.1 - February 2021

Stemmons Central Gold Master version 2.2.1.1 has officially been released to Stemmons' clients on February 2021. This release includes a few nicely added features and minor bug fixes reported by Stemmons' clients.

Stemmons Central Gold Master version 2.2.1.1 has officially been released to Stemmons' clients on February 2021. This release includes a few nicely added features and minor bug fixes reported by Stemmons' clients.

Below is the list of newly added features and bug fixes:

1. **Custom Query:** "Custom Query" is a new feature that would allow a custom query to be configured for Cases and Entities Application with filters. Once configured, the user will be able to use a prefix URL syntax and pass in the values to be filtered and returned the matched cases to the list.

**For example:** A custom query can be written to return list of all Open Cases for a particular meta data such as Property.

Once the above query is configured by the admin, from Cases Application, user can enter the following URL to execute the query and provide list of cases for a specific property: [https://cases.boxerproperty.com/CaseList.aspx?ASSIGNEDTOSAM=\\_customquery\\_9|PROPERTY^720](https://cases.boxerproperty.com/CaseList.aspx?ASSIGNEDTOSAM=_customquery_9|PROPERTY^720). With this URL, custom query 9 was configured in the system to allow the user to pass in a property address start with 720. The application then retrieves all open cases for 720 and return them to the case list.

2. **Extensible Grid Plug and Play:** Within an Entity Type, there would be a need to include an additional grid that show additional related data that would not normally return in a default configuration. This new feature will allow the organization to create an API endpoint that would retrieve and bind the data through an extensible data grid. The data can come from anywhere that just need to bind and pass in a parameter to connect the entity with the grid. For example: as a system default, the related cases for the entity will only show open cases. To display the close cases, an Extensible grid can be implemented and plug in for the Entity Type.

3. **Browser Tab Title:** When opening a specific List or Item, Cases and Entities will display the Title of the Entity or Case.

#### 4. **Minor Updates:**

- Improve performance on Entity List with documents.
- Correct issue with sorting on system fields such as Entity ID, List ID, etc. where it removes the grid data.
- Correct some filter issues in Simple Search and Advance Search
- Correct cascading issues for nested External Datasources
- Correct issues with Cast File Attachment and External Datasource cascading

**Thank You ...**
