Release: 2.1.6

Release Date:

Gold Master Version 2.1.6 has been officially released in January 2020. This release includes major bug fixes, and performance improvements.

This release covers major bug fixes that are mentioned below:

- Fixed: We have fixed the issue with the edit button. Now, the user does not need to click the edit button twice to edit an entity item.
- Fixed: We have fixed redirection issues of the "Create and exit" button in En ty application. Now, when users click on Create and Exit Bu on while creating a new entity item.
- Fixed: We have fixed the Entity email parser issue. Now, the user will be able to update the number field value using email commands.
- Fixed: In the dynamic template, the UI issue for multiple external data sources is fixed now each value of multiple external data sources will start with a new line on the entity view page.
