Release: 2.1.7

Release Date:

Gold Master Version 2.1.8 has been officially released in February, 2020. This release includes some new features, bug fixes, and performance improvements.

The major features which are included in this version are as follows:

- Chrome has a default Autofill op on that populates fields with saved information. To avoid overriding data in metadata fields, Stemmons has deactivated this op on for all Stemmons Applications.
- Mobile APIs are now more powerful and optimized.
- Improved data sync performance for Mobile APIs.

Also, this release covers major bug fixes that are mentioned below:

- Fixed: While syncing through external entities, the user will be able to update calculation fields of an entity items
- Fixed: In Updoc application, now the user will not have to re-authenticate each time the app is opened
